Note :

 1) DSCR is calculated as :
 (Adjusted Net Profit)*

 (Prinicpal Repayment + Interest Payment)

 (Adjusted Net Profit before Tax)*

2) Interest Service Coverage Ratio as :

(Interest Payment)

(*For DSCR : (Adjusted Net Profit = Net profit after tax + Non Cash Expenses + Finance Cost + Capital repayment from InVIT)

**For Interest Service Coverage Ratio : (Adjusted Net Profit = Net profit before tax + Non Cash Expenses + Finance Cost + Capital repayment from InVIT)

For the calculation of adjusted net profit (i.e. the numerator), adjustment with respect to addition of capital repayment from InVIT is considered, because as per the Section 48 of the Income Tax Act, which deals with capital gains tax on REIT/InvIT units was amended which stated - "any other income including debt repayment proceeds received by the unitholder, if not taxed under section 56(2)(xii) would be reduced from the cost of acquisition of units". Accordingly, necessary adjustments were made in book of accounts too and the same is now being reduced from Cost of Acquisition and not routed through statement of profit & loss. These funds also forms an important factor in repayment of debt. Therefore, the same is being considered for the purpose of calculation of adjusted net profit to depict a more appropriate picture)

Further, in the computation of Principal Repayment (i.e.the denominator), prepayment of NCD's amouting to Rs 25 crores(original issue size: 50crores) has not been considered, had the said prepayement also been considered, then the ratio would have been appeared at 1.71 times, instead of the current DSCR ratio of 2.19 times.
